db.createUser({
  user: 'devAdm',
  pwd: '123456',
  roles: [
    { role: 'read', db: 'clima_alerta' }
  ]
})

already on db clima_alerta
db.getUsers()
{ users: [ ], ok: 1 }

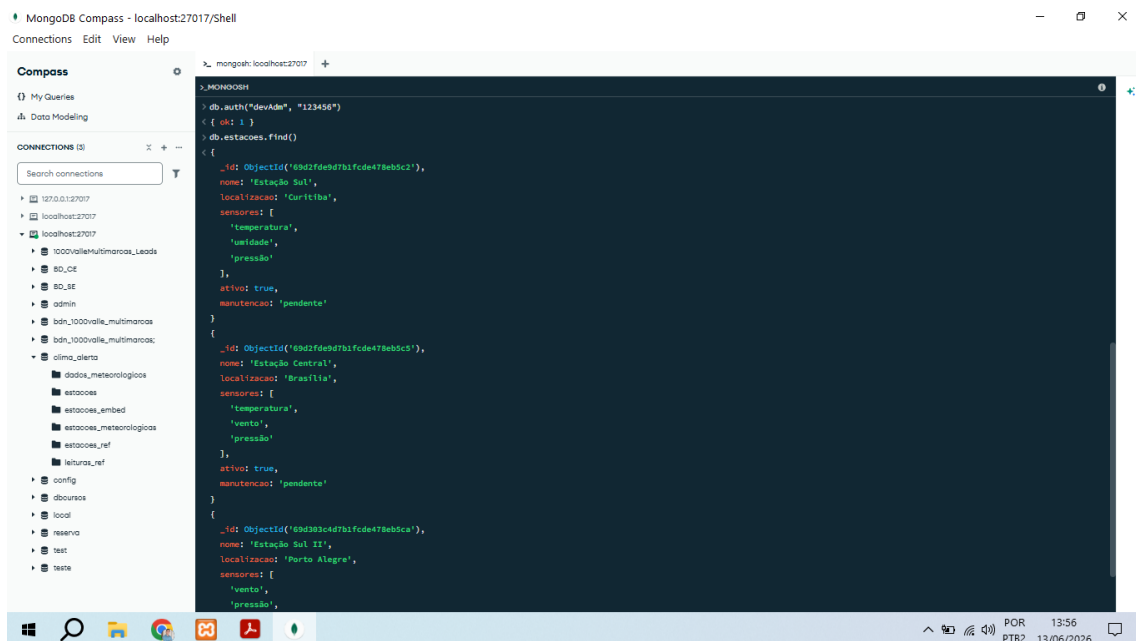

db.createUser({

EXERCÍCIO 4

Deletar a coleção e restaurar a partir do arquivo JSON.

EXERCÍCIO 5

Testar a conexão com Mongoose e capturar logs.

The image displays two sequential screenshots of a Windows PowerShell terminal window. The top screenshot shows the initial setup of a new Node.js project named 'Exercicio5'. The user navigates to the directory, initializes the project with 'npm init -y', and installs 'mongoose'. The 'package.json' file is created with the following content:

```
{
  "name": "exercicio5",
  "version": "1.0.0",
  "description": "",
  "main": "index.js",
  "scripts": {
    "test": "echo \\\"Error: no test specified\\\" && exit 1"
  },
  "keywords": [],
  "author": "",
  "license": "ISC",
  "type": "commonjs"
}
```

The bottom screenshot shows the user running 'node index.js'. The output indicates a successful connection to MongoDB: 'Conectado ao MongoDB!' and 'Quantidade de documentos: 6'. The terminal window also shows a file explorer sidebar on the left and a taskbar at the bottom with various application icons and system tray information.
